

What if everything you needed was in the cloud?

Calculated Controls LLC

Take a minute to envision this scenario. You're in the early stages of planning your next turnaround. Where are the drawings for V-102? What were the man-hours for E-101? Or, maybe you are new to the job or to this plant and you've never experienced a turnaround at this site. Your superiors have requested a budget and schedule from you but where are the numbers from the previous turnaround so you can prep?

The above is not unusual because of the number of industry pros retiring, high personnel turnover and lost (or never captured) information.

When I was working as an estimator for a major contractor, I can't tell you how many calls we would get from clients asking for previous turnaround information. They often would hire us without having to go through the bidding process just because we had the information on the previous job no one else seemed to have. That was good

The management of our company is comprised of former turnaround craftsmen.

for us, in one way, because we had done so many turnarounds. But it was not good for the client because they wouldn't know if they were going to realize a cost savings or not. And it was not good for us in many ways because the potential client would just call his previous contractor rather than us and we wouldn't even have an opportunity to bid. This isn't good for the industry either because it allows poor performing companies to continue their poor performance.

A cloud database solution

The management of our company is comprised of former turnaround craftsmen. Our company president, Billy Dobbins, began as a boilermaker and I began as an electrician. Just as we learned multiple crafts and worked our way up to planning, scheduling and project management, we learned to use the latest computer hardware and software to help us gage where we were, where we needed to be and to forecast possible outcomes. This was how we also learned to use the "cloud" as a database solution so you, as a client, don't have to rely on previous supplier information — you've got your own data on your own job.

Customized and easy to use

First a client tells us what information they would like to retain during a project or turnaround. We then determine how to present the information through reports, charts, graphs, etc. We send subject matter experts to your site to help you compile your initial

project scope, schedule and budget. That is stored in the database then updated during project execution according to your needs before, during and after the turnaround.

The system also allows your contractors to enter their updates in the system during each shift and automatically send summa-

ries and detailed reports to managers. Also, this gives you a dashboard for the safety, quality and performance of your turnaround. Your corporate office can simply log in at anytime to review project information and have a fully detailed account to help gage future projects. So, now you use

our Google™-like search capabilities for V-102 and have results within seconds from any device with a Web browser.

For more information, call Clayton Richards at (888) 790-9398, email info@calculatedcontrols.com or visit www.calculatedcontrols.com. ●

You. Us. Success.

We offer three areas of expertise to help you bring your next project or turnaround to a successful conclusion.

Project Controls Resources

We provide the project controls resources necessary to augment your staff, including project controls managers, field planners, analysts and more. All have special skills, a verifiable work history and are trained to easily adapt to your methods, procedures and processes.

Planning and Scheduling Services

We have a unique understanding of your needs because of our history in the field services industry. Properly estimating activities, sequencing the work and efficiently utilizing manpower are just part of how we assist you. We help with scope development, project and portfolio scheduling, bid package preparation and more.

Cloud-Based Business Solutions

We help you get useful information from your data. We can take your data and design a specialized database specifically tailored to your business needs. With our system, you will receive real-time reporting through automated information delivery, easy "Google™-like" search capabilities, one-click collaboration and sharing, custom dashboards and more. Every company relies on data to run its business. The easier it is to turn data into information, the faster you can use that information to improve your business.
